

SON 2026-2027 lecture 1

3TC Audio Project @ INSA Lyon

Tanguy Risset & Romain Michon

<https://inria-meraude.github.io/son/>

SON Introduction

- **Course website:** <https://inria-embedaude.github.io/son/>
- **Course github:** <https://github.com/inria-embedaude/son>
- **Teensy Audio Library:** https://www.pjrc.com/teensy/td_libs_Audio.html
- **Teachers:** Tanguy Risset (INSA TC), Alexandre Bento (INSA IF), Clemens Wegener (Inria), Benjamin Quiédeville (Inria/GRAME) and Romain Michon (U. Saint-Etienne, creator of the SON course)
- **3 weeks**
 - ~20h as course (with your laptop)
 - ~40h as project in binome
 - 1 day of demos at the end of the course

The SON kit

SON kit:

- A teensy with its audio shield, the USB cable and the welcome notice
- 2 potentiometers, 2 buttons, 2 resistors
- A Breadboard and jumper cables

Be gentle with the kit

Don't forget to give it back at the end of the project

Course schedule (1)

Part 1: Lectures (Amphi Chappe)

- **Lecture 1: Course Introduction and Programming Environment Setup** -- 02/02/2027 14h00-16h00
- **Lecture 2: Audio Signal Processing Fundamentals** -- 03/02/2027 :08h00-10h00
- **Lecture 3: Digital Audio Systems Architectures and Audio Callback** -- 03/02/2027 10h00-12h00
- **Lecture 4: Hardware Control and Audio Codec Configuration** -- 04/02/2027 08h00-10h00
- **Lecture 5: Audio Processing Basics I** -- 04/02/2027 10h00-12h00
- **Lecture 6: Audio Processing Basics II** -- 05/02/2027 08h00-10h00
- **Lab** -- 05/02/2027 10h00-12h00
- **Lecture 7: Introduction to Faust** -- 08/02/2027 08h00-10h00
- **Lecture 8: Faust on the Teensy and Advanced Control** -- 08/02/2027 14h00-16h00
- **Project Validation Session** -- 08/02/2027 16h00-18h00

Course schedule (2)

Part 2: project 9x4h Slots (Salle TD/TP/anywhere)

- **Independent work on Projects** -- *09/02/2027 - 19/02/2027*

Milestones sessions:

- **mid-term milestone:** 5mn presentation for each project (TP4, 12/02/2027 14h)

Project presentation sessions (Friday 19/02/2027 all day):

- **Demos in Chappe Hall:** 15mn presentation for each project

Course Overview

- SON is the only project *with all students*
- SON activates the following skills:
 - programming (C/C++)
 - signal processing
 - embedded systems
 - hardware/software interface
 - imagination
 - autonomy
 - intensive project
- SON is intensive during 17 days

How is course evaluated

- The evaluation is based 100% on the project quality
 - Final demos with other TC teachers
 - A video demo is required (1:30 approx), should be fun
- A github site is a plus
- A poster is required which on your project
 - it is evaluated in the ASDS course (in parallel of SON)

What is a good project?

- The form of the project is quite free, it can be
 - hardware oriented (controller with 3D printing stuff, electronics etc)
 - software oriented (various interface on host)
 - audio oriented (in C++ or Faust)
 - sound synthesis or audio effect
 - any original idea
- We require that:
 - There is some signal processing
 - The signal processing should be executed on the teensy

How are evaluated projects?

- Evaluation takes into account
 - overall quality
 - robustness/stability
 - novelty/originality
 - demo
 - Human/machine interface

what about AI

- Students are welcome to use help from any places:
 - existing code/libraries on the web
 - IA helpers
 - Human friends, etc...
- The rules are:
 - You should understand your code and be able to explain it
 - Be honest with yourself and with others

Choosing binomes

Binomes rules:

- each binome is composed of 2 people
- of the same 3TC group (Semester 2)

procedure (now):

- Once the binome is constituted, queue on the side of the Amphi
- Indicate your names to the first teacher (and get a *binome number*, remember it)
- Get a son-kit for your binome

Pause: Binome Selection

Course 1 part 2: the teensy

The Teensy 4.0 and Audio Shield

The Teensy 4.0 (left) and the associated audio adapter board (right)

- The [Teensy 4.0](https://www.pjrc.com) is a microcontroller-based development board developed by PJRC. : <https://www.pjrc.com>.

Cortex-M7 ARM processor

- Powerful ARM Cortex-M7 processor (i.MX RT1062: 600 MHz with a Floating Point Unit - FPU)
- DSP extension (ISA ARMv7E-M: SIMD instr., MAC instr., Saturation, etc.)
- Use efficiently in the [Teensy Audio library](#)

Teensy performance from Core Benchmarks

The pinout reference card

Welcome to Teensy® 4.0

32 Bit Arduino-Compatible Microcontroller

To begin using Teensy, please visit the website & click [Getting Started](http://www.pjrc.com/teensy).

www.pjrc.com/teensy

Digital Pins
digitalRead
digitalWrite
pinMode

Analog Pins
analogRead

PWM Pins
analogWrite

Digital Audio
Audio Library

Serial Ports
Serial1 - Serial7

I²C Port
Wire Library

SPI Port
SPI Library

CAN Bus
FlexCAN_t4 Library

Bad LED Loading Status
dim: Ready
bright: Writing
blink: No USB

3V (3.6 to 5.5 volts)
GND
3.3V (250 mA max)

On/Off Program
GND
3.3V
VBat

All digital pins have interrupt capability.

Teensy® 4.0 Back Side

Additional pins and features available on the back side

PWM SCL2 TX6 A10 24 25 A11 RX6 SDA2 PWM
MOSI1 A12 26 27 A13 SCK1
CRX3 28 29 TX7
OUT1B 30 31 CTX3
32 33 MCLK2 PWM

Cut to separate VIN from VUSB, if using battery or external power.

On/Off Program
GND
3.3V
VBat

Use 3V coin cell for Date & Time and power management features

SD Card (4 bit SDIO)
SD Library
SD.begin(BUILTIN_SD_CARD)

USB Host
USBHost_t36 Library

Teensy 4.0 signal pins are **not** 5V tolerant. Do not apply more than 3.3 volts to any pin, except VIN or VUSB.

34 DAT1 MISO2 PWM
35 DAT0 MOSI2 PWM
36 CLK CS2 PWM
37 CMD SCK2 PWM
38 DAT3 RX5 PWM
39 DAT2 TX5 PWM

For solutions to the most common issues and technical support, please visit:
www.pjrc.com/help

Teensy 4.0 System Requirements:
PC computer with Windows 7, 8, 10 or later
or Ubuntu Linux 14.04 or later
or Macintosh OS-X 10.8 or later
USB Micro-B Cable

Pins of the Teensy

- **The pins are not 5V tolerant. Do not drive any digital pin higher than 3.3V.**
- 40 pins (24 easily accessible), used as GPIO (General Purpose Input/Output) or for integrated serial protocols (UART, I2C, SPI etc.)
- Pins have several names: Pin 19 is also A5 (Analog input) is also SCL0 (I2C clock) is also PWM (analog output)
- Pins with orange 'A*' names can be used for analog or digital input/output (e.g. potentiometer)
- Other pins are used for digital input/output only
- PJRC function are: `analogRead` , `analogWrite` , `digitalRead` , `digitalWrite`

Pins of the Teensy

- Some of the pins are used to communicate with the audio adator
- Some (other) pins will be used to interface hardware (buttons, potentiometers, etc)
- The USB connector between the Teensy and the host computer is used to:
 - Power the teensy by host
 - program the teensy with arduino on host (JTAG protocol)
 - Serial (or UART, i.e. ascii characters) communication between host and teensy
 - Other control protocols (MIDI, OSC, etc.
 - stream audio (i.e. use teensy as an audio card)

The Audio Adapter Board

The [audio adaptor board](#) provided by PJRC that integrates a **low power stereo audio codec** (NXP Semiconductors SGTL5000 codec) and a **SD card reader**.

The Teensy audio adaptor (rev. D)

Audio Adaptor pins

- The [PJRC audio shield page](#) indicates pins used by the codec and the SD card.
- I2S (or I²S: Inter-IC Sound, a declination of I2C) is used to transfer samples bit by bit between the teensy and the audio codec in both direction (i.e., from and to the teensy)
- The pins 6-8, 10-13, 15, 18-21 and 23 **cannot be used in your design**

The Teensy Development Framework: teensyduino

- The Arduino IDE software with the Teensyduino add-on is used in SON:
https://www.pjrc.com/teensy/td_download.html
- Should work on MAC OS, Windows and Linux
- The installation procedure can be found on the PJRC website (note that it slightly varies between platforms):
https://www.pjrc.com/teensy/td_download.html

End of Lecture 1
